## Iridium® Satellite Tracking

### GeoC Sat

The GeoC S devices are third-generation Iridium satellite personal tracking and messaging devices. The touchscreen allows quick access to the menus. A guarded SOS button is used for immediate emergency/alert notification. Both S devices are designed with ultra-low power consumption electronics drawing less than 35 µA during sleep. An internal 1.95 A-Hr rechargeable Li-Ion battery allows the user to send hourly position reports for up to two months (1500 reports).

The S1 is a dedicated Iridium satellite tracker. The S2 is a dual-mode Iridium/GSM tracking and messaging unit additionally able to send location to send location reports and messages via the local GSM/GPRS network.

The GeoC S devices can send location reports, messages or emergency notifications to your Ops Room and authorized Pro App users. Both, your Ops Room and Pro App users can interact with the S1 and the S2.

The S1 and the S2 can be used as primary tracking devices or as independent backup devices in places of low or no-GSM coverage.

GeoCompanion provides Iridium Satellite airtime for different scenarios and requirements.

S1	S2
Iridium Satellite	Iridium / GSM
Pocket size tracker	Pocket size tracker
2-way communication	2-way communication
Panic button	Panic button
Resistive touchscreen	Resistive touchscreen
Geofencing, speeding	Geofencing, speeding
