## GeoC WT

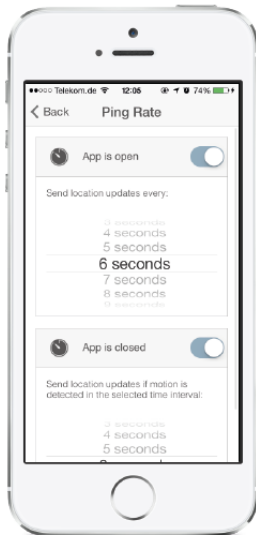

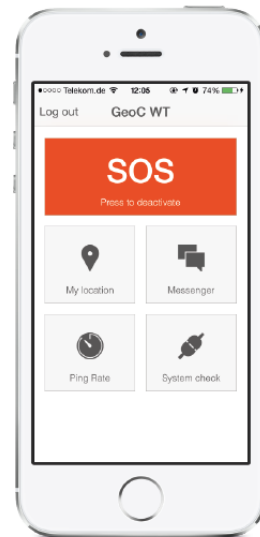

The WT app is a modern and discrete tracking, emergency notification and messaging application for iPhone that enables your security managers to locate and communicate with your global workforce. If incidents occur (criminal, political, environmental, etc.), your organisation is enabled to quickly identify those who are safe and those persons who require assistance.

The WT app sends individually configurable location updates securely to your Headquarter, Ops Room or authorized GeoC Pro app users. Emergency notifications or geofencing alerts are delivered to your Headquarter within seconds and allow rapid response to an incident.

The WT app is very user friendly and does not require intensive user training. It operates in both the foreground or background without interfering with other applications or core iPhone functions.

The WT app can easily be distributed within your organization, minimizing installation, setup and maintenance.

For more information or a presentation please contact us.

### Features at a glance

- Native iOS7 application
- Efficient and discrete tracking (real-time or motion-based, fully configurable)
- Instant messaging with Ops Room and other users
- Emergency notification and geofencing alerts
- Corporate privacy policy compliant
- Easy and intuitive user interface
- Battery saving background operations
- No interference with other iOS applications or core iPhone functions
